

**Abstract of the Disclosure**

A program guide in which a video layer includes a plurality of video objects including title objects, each title object having  
5 associated with it a channel and at least one time slot, the video layer being formed in response to a received video stream; and a graphics layer comprising a plurality of graphics objects including title overlay objects, each of the title overlay objects selectively imparting at least a visual de-emphasis to a respective title object  
10 in the video layer, the visual de-emphasis being imparted to title objects not being associated with a desired time slot.
